Münster, 16.06.2021

Patient: Rutkowska, Emilia born 24.02.2017

Diagnosis: pulmonary vessels disease

Cost proposal for percutaneous transluminal angioplasty, stent placement in the Department of Pediatric Cardiology, University Hospital Münster

Dear family Rutkowski,

based on the medical information provided, we have calculated the following cost estimation:

Cost estimation and additional service:

The expected costs of the above stated treatment add up to:

Inpatient stay (incl. risk and other surcharges) **8.500,00 €**

The present in-patient calculation is based on the medical information, which has been provided to us. The calculation is based on a **risk surcharge** of 20 % and an **upper length of stay up to 10 days** of the inpatient stay. The time of admission depends on our bed availability.

We explicitly point out that this is a preliminary cost estimation. In case of any complications or other unforeseen illnesses and further treatment for the patient, we have to recalculate this budget in consideration of additional treatment performed. The difference has to be paid by the patient.

The exact final costs can only be calculated and settled **after** treatment and discharge of the patient. These costs are established in accordance with the guidelines of German accounting systems for medical performances and may – in individual cases – exceed the estimate.

You might need a PCR screening test with negative results for COVID-19, required by some airlines regarding to the current official regulations for infection protection. Please note, that the costs for the testing are not included in this cost estimation.
